

CORONA VIRUS OUTBREAK

Prevention & Treatment

Prevention

There is currently no vaccine to prevent Coronavirus 2019-nCoV infection. The best way to prevent infection is to avoid being exposed to this virus.

WORLD HEALTH ORGANISATION (WHO)

Recommends everyday preventive actions to help prevent the spread of respiratory viruses, including:

- **Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use an alcohol-based hand Dettol sanitizer.**
- **Avoid touching your eyes, nose, and mouth with unwashed hands.**
- **Avoid close contact with people who are sick showing flu like symptoms.**
- **Stay home when you are sick!**
- **Cover your cough or sneeze with a tissue, then throw the tissue in the trash bin.**
- **Clean and disinfect frequently touched objects and surfaces.**

These are everyday habits that can help prevent the spread of several virus among our prayer congregation, inshaAllah.

Treatment

There is no specific antiviral treatment recommended for **Coronavirus 2019-nCoV** infection. People infected with **Corono virus 2019-nCoV** should receive supportive medical care to help relieve symptoms. For severe cases, treatment should include medical care to support vital organ functions.

People who think they may have been exposed to (CoronoVirus) 2019-nCoV should contact your GP doctor or immediately report to your nearest hospital's emergency department.
